

## **Sustainability and the Environment**

Sustainability is the key word for Citrus Juice

Citrus Juice seeks to develop positive practices related to the Environment and Sustainability. Innovative solutions and the use of the most modern technologies are the keys to the reduction of the environmental impact during the stages of the productive process of the company. External companies that evaluate the compliance of our Environmental Management System routinely audit us routinely. Although Citrus Juice is a young company, we already collect various certifications of sustainability and socio-environmental responsibility.

Our sustainable practices include:

- The use of the entire fruit in the production of Concentrated Juice and the by-products;
- Almost 100% of the energy consumed in the manufacturing process comes from a renewable source (burn of eucalyptus chip);
- Water use management;
- Reuse of the water obtained in the Concentrated Juice;
- Use of effluent treatment system;
- Fert-irrigation of the eucalyptus plantations, which will be posteriorly used in the energy generation, with monitoring of both the effluent applied and the irrigated soil;
- Management of solid waste generated, with the correct destination of hazardous and non-hazardous waste;

- The environmental awareness of our collaborators, with the accomplishment of the Environment Week, planting of seedlings, guidance to prevent pollution;
- Respect for state and federal environmental laws.
